

## IT Solutions

### IT Solutions

Today's *Smart homes* are designed around a solid copper wire (CAT5e/CAT6) network, that provides the communications highway between the Internet provider and other systems and/or system services.

- **Systems Stability**
- **Broadband Service**
- **Battery Back-Up**
- **Reduced Monthly Fees**
- 10 • **User Friendly**

A basic IT Solution consists of a Broadband Service, a Router (Wired and/or Wireless) and Access Points, available at various locations within the home.

Normally connected to the Network would be devices like a Battery Back-Up component, a Kaleidescape Media Server (Movies and Music), the Broadband Internet Service (surf the web, email, Facebook, YouTube, or Netflix), PC, laptop, and the 2-way AMX Control System.

You are able to check the status of the Lights, HVAC, Pool Spa and turn them on/off because of the Network.
